

Open facade: gaps in the facade are the right width for bats to squeeze through and nestle in behind the planks.

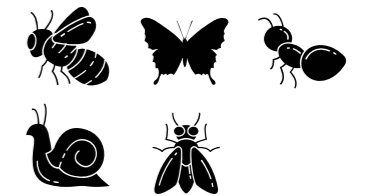

Lattice: the wooden cladding provides support for diverse bird species to build their nests.

Wadi: a microclimate which is filled by rain water, invites frogs and various other animals to come and drink.

Garden: the garden contains a wide variety of plants, shrubs and trees. The deciduous trees offer protection for animals including insects, birds and small mammals.

Vegetation: the rooftop terrace and lattice provide space for different types of vegetation. The plan for planting includes flowers and berries which serve as food for birds and insects.

Sidewalk Garden: 40cm of paving has been removed around the entire building to provide space for vegetation
